

# Homework 3: Tools of the Trade - Data processing and Performance Evaluation

Group - David Guzmán, Lars Prehn

November, 9th 2016

## Contents

<b>1</b>	<b>Tools of the Trade - Data processing and Performance Evaluation</b>	<b>2</b>
1.1	For the links 5, 14 and 35, for channels 36, 64 and 165, plot the following: .	2
1.2	For each combination of link and channel (yes, that means 1014 combinations, 78 links and 13 channels), compute the MAC frame delivery ratio and the median RSS. . . . .	2
1.3	Plot . . . . .	2
1.4	Consider the data for the links 1 and 17. Plot the ECDFs for all the RSS values of both links (i.e., two lines into a single plot). What do you observe?	4

# 1 Tools of the Trade - Data processing and Performance Evaluation

1.1 For the links 5, 14 and 35, for channels 36, 64 and 165, plot the following:

[1]

Figure 1: Dataset

Figure 2: Dataset

Figure 3: Dataset

1.2 For each combination of link and channel (yes, that means 1014 combinations, 78 links and 13 channels), compute the MAC frame delivery ratio and the median RSS.

1.3 Plot

channel versus all corresponding delivery ratios, i.e., you have the channel number on x-axis and delivery ratios on the y-axis.

Figure 4: Dataset

fdr vs link  
Chanel vs RSS  
Link vs RSS

Figure 8: Dataset

Figure 9: Dataset

**1.4** Consider the data for the links 1 and 17. Plot the ECDFs for all the RSS values of both links (i.e., two lines into a single plot). What do you observe?
